

IN THE CLAIMS:

1. (Currently amended) A wireless control unit for converting a video game system having a game console with game controller ports and being adapted to operate with wired game controllers connected to the game controller ports into a system operable with wireless controllers, the wireless controller unit comprising:

a game controller having at least one user operable switch, wireless transmitter circuitry for transmitting game information, wireless receiver circuitry for receiving controller information, and a vibrating member; ~~and~~

a console interface connected to the game console via at least one of the game controller ports and having wireless receiver circuitry for receiving the game information from the game controller, said console interface including wireless transmitter circuitry for wirelessly transmitting controller information to the game controller; ~~said controller information including control signals for activating said vibrating member; and~~

wireless communication protocol for communicating between said game controller and said console interface, wherein said wireless communication protocol comprises Radio Frequency (RF) from said game controller to said console interface.

2. (original) The wireless control unit according to claim 1, wherein said game controller further comprises a channel selection switch for selecting an operational frequency of said game controller.

3. (original) The wireless control unit according to claim 1, wherein said console interface further comprises a channel selection switch for selecting an operation frequency of said console interface.

4. (original) The wireless control unit according to claim 1, wherein the game console further comprises wireless receiver circuitry for receiving the game information from the game controller.

5. (original) The wireless control unit according to claim 1, wherein said console interface further comprises power supply means for supplying power to said wireless transmitter circuitry.

6. (original) The wireless control unit according to claim 5, wherein said power supply means comprises a battery disposed within said console interface.

7. (original) The wireless control unit according to claim 5, wherein said power supply means comprises power obtained from the game console through the game controller port.

8. (original) The wireless control unit according to claim 1, wherein said console interface further comprises a pass through connection for the game port.

9. (canceled)

10. (canceled)

11. (canceled)

12. (canceled)

13. (currently amended) The wireless control unit according to claim 9, wherein said wireless communication protocol further comprises RF from said console interface to said game controller.

14. (canceled)

15. (canceled)

16. (canceled)

17. (canceled)

18. (canceled)

19. (original) The wireless control unit according to claim 4, wherein the game console wireless receiver comprises an RF receiver.

20. (original) The wireless control unit according to claim 19, wherein said game controller transmits game information to the game console via said RF receiver.

21. (original) The wireless control unit according to claim 20, wherein said game controller transmits the game information at a predetermined frequency.

22. (original) The wireless control unit according to claim 1, wherein said console interface further comprises a built in connector that is directly connected to the game port without wires.

23. (original) The wireless control unit according to claim 1, wherein said control signals for activating said vibrating member include signals for selectively activating said internal vibration member in response to action within a game being played.

24. (New) A wireless control unit for converting a video game system having a game console with game controller ports and being adapted to operate with wired game controllers connected to the game controller ports into a system operable with wireless controllers, the wireless controller unit comprising:

a game controller having at least one user operable switch, wireless transmitter circuitry for transmitting game information, wireless receiver circuitry for receiving controller information, and a vibrating member;

a console interface directly connected to the game console without wires via at least one of the game controller ports and having wireless receiver circuitry for receiving the game information from the game controller, said console interface including wireless transmitter circuitry for wirelessly transmitting controller information to the game controller; and

wireless communication protocol for communicating between said game controller and said console interface, wherein said wireless communication protocol comprises Infrared (IR) from said game controller to said console interface.

25. (New) The wireless control unit according to claim 24, wherein said game controller further comprises a channel selection switch for selecting an operational frequency of said game controller.

26. (New) The wireless control unit according to claim 24, wherein said console interface further comprises a channel selection switch for selecting an operation frequency of said console interface.

27. (New) The wireless control unit according to claim 24, wherein the game console further comprises wireless receiver circuitry for receiving the game information from the game controller.

28. (New) The wireless control unit according to claim 24, wherein said console interface further comprises power supply means for supplying power to said wireless transmitter circuitry.

29. (New) The wireless control unit according to claim 28, wherein said power supply means comprises a battery disposed within said console interface.

30. (New) The wireless control unit according to claim 28, wherein said power supply means comprises power obtained from the game console through the game controller port.

31. (New) The wireless control unit according to claim 24, wherein said console interface further comprises a pass through connection for the game port.

32. (New) The wireless control unit according to claim 27, wherein the game console wireless receiver comprises an IR receiver.

33. (New) The wireless control unit according to claim 32, wherein said game controller transmits game information to the game console via said IR receiver.

34. (New) The wireless control unit according to claim 24, wherein said control signals include signals for selectively activating said internal vibration member in response to action within a game being played.
